SAN FRANCISCO

Airlophone opens a browser-based calling service with published rates for 220+ countries

Airlophone, a browser-based international calling service created by Fabio Jonathan, is available at airlophone.com. It calls landlines and mobiles in 220+ countries from any modern browser, with no app to install, no SIM card and no subscription. Every rate is published before signup, and the price is read from the digits dialled, so a landline and a mobile in the same country are never quoted at one blended rate.

Credit is prepaid from \$5.00 and does not expire. Calls run from \$0.02 a minute, and the first 60 seconds are free and need no card. A team can share one balance with no seat fee to call, with member caps and activity analytics. Professional adds selected recording, AI transcripts and call notes, call lists and follow-ups for \$0.02 per minute on top of the call rate.

Airlophone began as an internal tool for calls to banks, clients and government offices abroad. Many of those institutions could only be reached on an ordinary landline. The team already used AI notes after Zoom calls, so Professional gives phone calls the same continuity through searchable transcripts, AI call notes, owners and follow-ups.

“I kept needing to call banks and clients abroad, but neither carrier rates nor a monthly phone system fit an occasional call. We built the dialer for our own work, then made it available to anyone with the same problem.”

Fabio Jonathan, founder

ABOUT AIRLOPHONE

Airlophone was created by Fabio Jonathan in San Francisco. The full rate card is at airlophone.com/rates and the press kit, with screenshots, logos and a named contact, is at airlophone.com/press.

The short version

Product	Airlophone
What it is	Airlophone is a browser-based international calling service: call landlines and mobiles in 220+ countries at published per-minute rates, with no app to install, no SIM card and no subscription.
Price	Prepaid credit, from \$0.02 a minute. \$5.00 minimum top-up (\$50.00 on a team account), no subscription, no connection fee, credit does not expire. The first 60 seconds are free and need no card.
Also sells	Rentable US and Canada phone numbers at \$5.00 a month, for receiving calls and texts.
Accounts	Personal accounts can use Basic or Professional. Team accounts share one balance with no seat fee to call, plus member caps, call ownership and activity analytics.
Professional	Selected call recording, searchable AI transcripts, AI call notes, call lists and follow-ups for \$0.02 per minute on top of the normal call rate.
Platforms	Any modern browser, desktop or mobile. Nothing to install, no SIM card.
Release date	Available now
Developer	Created by Fabio Jonathan in San Francisco.
Website	airlophone.com
Press contact	Fabio Jonathan, fabio@airlophone.com

Every price is generated from the live rate card when this kit is built. The full card is at airlophone.com/rates.

What it does

01

The price is read from the digits you dial, so a landline and a mobile in the same country are never quoted at one blended rate.

03

Calls run in the browser on desktop or mobile. There is no app to install and no SIM to swap.

05

A team shares one balance and calling carries no seat fee, so somebody who made no calls this month costs nothing.

07

Call lists keep numbers, owners, attempts, outcomes and callbacks together, then open the next assigned call in the browser dialer.

09

The first 60 seconds are free and need no card, so the product can be tested before anything is paid.

02

The whole rate card for 220+ countries is public before you create an account, including the destinations that are refused and why.

04

Credit is prepaid from \$5.00 and does not expire. There is no subscription and no connection fee.

06

Professional adds selected call recording, searchable AI transcripts and AI call notes for \$0.02 per minute on top of the normal call rate.

08

Team analytics show calls, answer rate, talk time, spend and follow-ups from the same call record used by each member profile.

10

A US or Canada phone number can be rented for \$5.00 a month, so calls can be returned as well as placed.

WHAT IT DELIBERATELY CANNOT DO

No emergency services

Airlophone cannot reach 911, 999, 112 or their equivalents anywhere, and cannot report your location to a dispatcher. Keep a phone that can.

Calling is outbound only

The dialer places calls; it does not receive them. A rented number can receive calls and texts, but it cannot send texts, and most institutions deliberately reject internet phone numbers for two-factor codes.

The caller ID is not your own number

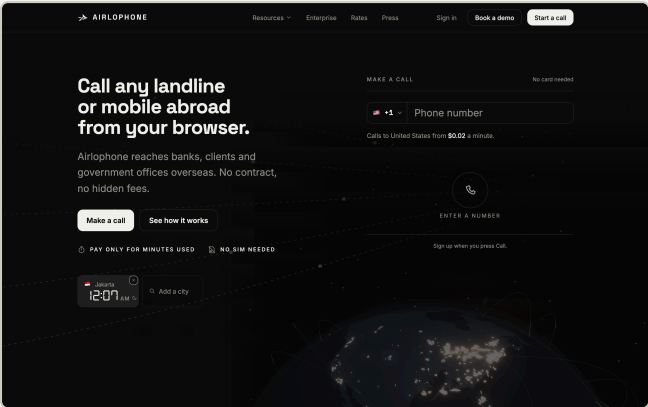

Outbound calls carry a number we assign. If an institution verifies you by the number you are calling from, that check will not pass and you should expect additional security questions.

Premium-rate numbers are refused

Ranges that exist to bill the caller heavily are refused rather than priced, so a misdialled premium number cannot run up a bill.
